

case study: Lower Lakes

project: Lower Lakes Irrigation Pipeline

client: Leed Engineering & Construction/SA Water

location: South Australia

product: Flowtite GRP Pipe & Fittings

manufacture & supply: 56kms of DN1000, DN900, DN750, PN20 in 12mtr lengths. Also many flanges, bends and tees to supply a fully GRP pipe supply package.

value: \$20m—\$50m

year of project: 2009

description: We supplied installation training and technical assistance to optimise design of rigid pipe sections and fittings. Pipeline was supplied, installed, commissioned on time and successfully placed into service meeting tight deadlines. Flowtite GRP Pipe was selected due to its long term properties and corrosion resistance, even in saline water environments. Its ease of installation and no need for cathodic protection also made Flowtite GRP Pipe and Fittings a better choice for the client.
